DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 29, 2009 has been entered.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Election/Restrictions

3. Applicant elected with traverse Group I in the reply filed on March 26, 2008.
The requirement was made FINAL in the Office action mailed on April 9, 2008.
4. Claims 12, 14-22 remain withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on March 26, 2008.

Claim Rejections - 35 USC § 112

5. Claims 5-11 and 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 recites the limitation "cross member" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 10 recites the limitation "the head" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 10 recites the limitation "a pipe" in line 3. It appears to be a double inclusion of the "elongate head pipe" recited in line 2.

Claim Rejections - 35 USC § 102

6. Claims 5-7, 10, 11 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Higgins (816,470).

Higgins discloses a nozzle comprising:

a T-piece having:

a leg 5;

an elongate head pipe 9 having a longitudinal axis (horizontal axis in figures 1 and 2) and an internal curvature (internal curvature of 9 that accommodates plugs 10 and 11);

an aperture 7;

two pins 10, 11.

Claim Rejections - 35 USC § 103

7. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Higgins (816,470).

Higgins discloses the limitations of the claimed invention with the exception of the fluid passageway having the same diameter as the cross member. Although Higgins discloses, on page 1, lines 65-68, that the size of the nozzle at its discharge end is increased to accommodate said apertures 9 and plugs 10, 11 and insure structural strength, Higgins does not specifically disclose the internal diameters of the fluid passage and the cross member. It is knowledge within one of ordinary skill in the art to size fluid passages. It would have been obvious to a person having ordinary skill in the art at the time of the invention to have sized the internal diameter of the fluid passage and cross member to maintain constant fluid volume.

Response to Arguments

8. Applicant's arguments filed October 29, 2009 have been fully considered but they are not persuasive.

Applicant argues that Higgins does not disclose flat end faces. Higgins discloses flat end faces (end face of discharge passage 14) of pins 10, 11.

Applicant argues that Higgins does not disclose two curved deflectors that converge towards the aperture to produce a flat spray pattern which is substantially parallel to the longitudinal axis of the head pipe. Higgins discloses two curved deflectors (the curved internal surfaces of aperture 9 above and below discharge

passage 14). The flat spray pattern is parallel to the longitudinal axis of the head pipe (horizontal axis in figures 1 and 2).

Regarding applicant's argument directed to US Patent No. 724,008, claims 5-7, 10, 11 and 25 are anticipated by Higgins, US Patent No. 816,470.
